PSY 401B/501B

Psychophysiology Laboratory

Spring, 2016

Supervising Instructor: John JB Allen (John.JB.Allen@Arizona.edu)
Laboratory Teaching Assistant: Lauritz Dieckman (lauritzd@email.arizona.edu)

Laboratory Location
Laboratory sessions will take place in the Psychophysiology Laboratory, room 409 Psychology. This is a research laboratory, but times will be made available for class members to conduct experiments, under the supervision of the teaching assistant, in the laboratory.

Lab Introduction & Tour
Skin Conductance (Feb 16)
Cardiovascular (Mar 8)
EEG (Apr 5)
ERP (Apr 26)

Description
Psychophysiology Laboratory must be taken concurrently with PSYC 401A/501A, Psychophysiology Seminar. The objective of the laboratory is to provide a pragmatic "hands-on" experience in psychophysiological recording and analysis. The laboratory will involve learning the many facets of psychophysiological signal acquisition and analysis. Four experiments will be conducted, each involving different response systems, offering you the opportunity to gain experience acquiring, analyzing, and interpreting autonomic and electrocortical psychophysiological measures.

Evaluation
For each experiment, students will be required to write an APA-style method and results section. These four papers will form the basis of your grade for the lab.

Experiments to be conducted

Experiment 1: Skin-conductance Guilty Knowledge Technique
Experiment 2: Electrocardiographic (EKG) responses to stress
Experiment 3: Frontal electroencephalographic (EEG) spectral changes
Experiment 4: Event-related brain potentials (ERPs)

Readings:

Readings will be provided as required in addition to the following, which should be read in advance of the first laboratory session (available from reading list for downloads on class website):

(Note: This is the previous edition of the text)
